SUMMARY — Software Engineer with 3 years of experience building production SaaS applications across backend and frontend systems using TypeScript, Node.js, NestJS, React, Kafka, Redis, and Kubernetes. Experienced in developing REST APIs, scalable microservices, asynchronous workflows, and reusable React components with a strong focus on performance, reliability, testing, and production debugging. Proven ability to own features end-to-end across development, validation, deployment, and operational support.

WORK EXPERIENCE

Associate Software Engineer

Oct 2024 – Present

Contentstack | India

- Designed and integrated a Kafka-backed event SDK for the organization orchestration platform, enabling reliable asynchronous communication across distributed services and reducing organization provisioning time from **20 minutes to under one minute**.
- Designed and implemented a resilient Redis/Kafka-based organization pool replenishment service capable of asynchronously provisioning **1,000+ organizations** while maintaining consistency across distributed workers.
- Developed REST APIs and a comparison engine capable of evaluating configurations containing **250+ features**, enabling efficient validation and synchronization across complex SaaS workflows.
- Developed a parallel event aggregation and distribution system processing **250+ features across 9 products and 550+ organizations in under 10 seconds**, improving platform performance and reliability by **80%**.
- Improved asynchronous Redis queue reliability through bounded retries, timeout coordination, and delayed message handling, achieving a **100% successful organization assignment rate** in production.
- Built feature validation and plan verification engines to enforce business constraints before auto-provisioning, preventing invalid state transitions while increasing over-usage revenue recovery by **60%**.
- Built backend infrastructure for automated test email generation and runtime validation, reducing false positives and improving automated testing effectiveness by **50%**.
- Resolved production issues across distributed services, including race conditions, queue timeouts, deployment validation failures, and asynchronous workflow inconsistencies.

Associate Software Engineer Intern

Sep 2023 – Oct 2024

Contentstack | India

- Developed React-based applications and reusable UI components, integrating frontend workflows with backend APIs across production features.
- Engineered a queue-throttled upload architecture supporting **100 concurrent file operations**, reducing backend resource utilization by **90%**.
- Implemented dynamic configuration and validation controls for multi-tenant SaaS environments, improving operational flexibility without requiring deployments.
- Established unit and end-to-end testing practices to improve reliability across distributed service boundaries.

SKILLS

Languages: TypeScript, JavaScript, Node.js, Go (Currently Learning)

Backend: NestJS, REST APIs, Microservices, Event-Driven Architecture

Frontend: React, React Final Form, Redux Toolkit, HTML, CSS

Databases: MongoDB, PostgreSQL

Infrastructure: Docker, Kubernetes, Git, CI/CD

Testing: Jest, Vitest, End-to-End Testing

Distributed Systems: Kafka, Redis, RabbitMQ, Asynchronous Processing

EDUCATION

Mumbai University

Bachelor of Engineering in Computer Engineering, CGPA: 8.12/10

2023
